

Module Title

A local Screeeps competition module

docs/competitions/module-template.md

Summary

One paragraph describing the challenge, the learner skill, and why this module exists.

Skill Target

- Primary:
- Secondary:
- Program track:
- Recommended episode:

Prerequisites

- Local Screeeps server is running.
- Learner can deploy code to the local server.
- Required room state:
- Required local tools:

Setup

Document the exact room, bot, or world state needed before the timer starts.

```
# shell commands
```

```
// server CLI commands
```

Challenge

Describe what the learner must do in player terms.

Pressure

Describe what pushes back: invader wave, repeated waves, bot colony, time limit, resource limit, or scoring rule.

Win Condition

The learner passes when:

- Condition 1
- Condition 2
- Condition 3

Scoring

	Metric	Full Credit	Partial Credit	
	Outcome			
	Code behavior			
	Debugging process			

Replay

Commands to reset or rerun the module.

Reflection

- What failed first?
- What did the code detect correctly?
- What was still manual?
- What evidence proves the fix worked?

Extensions

- Easier:
- Harder:
- Team variant:
